2025 CMS HIERARCHICAL CONDITION CATEGORY (HCC) CODING

The 2025 HCC Risk Scores are now available in Health Endeavors.

HCC coding is a risk-adjustment model originally designed to estimate future health care costs for patients. Proper documentation and coding support Medicare in assessing healthcare needs and allocating appropriate resources for patient management.

CMS-HCC Model Blends

Performance Year	Version 24 (V24)	Version 28 (V28)	Based on Service Year
2024	67%	33%	2023
2025	33%	67%	2024
2026	0%	100%	2025

How the Recapture Rate Works

- The *2025 Recapture Rate* is based on ICD-10 codes present in the V24 model (HCC 1:1 match).
- The recapture rate is year-to-date (YTD) and is subject to changes as claims are processed.
- Evidence-based HCC recapture rates are typically targeted at around 85%.
